

WEEK 1 DAY 6

NAME:VUDA JAYA SAI GANESH

GROUP:S2

Pre-Dataset Readiness & Mentor Review

Milestone Overview

- **Objective:** Finalize the pre-dataset package and present proposed methodologies for mentor alignment before full implementation.
- **Key Deliverables:**
 - Completed Methodology V1 documentation.
 - Detailed preprocessing, modeling, and evaluation plan.
 - Verified data split strategy, performance metrics, and constraints.
 - Mentor review integration & final experiment updates.

Foundation & Dataset

- **Data Sources & Schema:**
 - Source datasets identified and verified.
 - Initial exploratory data analysis (EDA) summary and quality checks.
- **Data Readiness Check:**
 - Formatting, structure, and missing value assessments completed.

Preprocessing & Pipeline Architecture

- **Preprocessing Pipeline:**
 - Cleaning, normalization/scaling, and feature encoding.
 - Feature selection and engineering strategy.
- **Modeling Approach:**
 - Baseline Models (e.g., standard classifiers/regressors).
 - Advanced Candidate Models under evaluation.
- **Constraints & Considerations:**
 - Computational limits, runtime constraints, and resource availability.

Data Splitting & Evaluation Metrics

- **Split Strategy:**

- Train / Validation / Test ratio (e.g., 70 / 15 / 15).
- Leakage prevention and stratification considerations.

- **Evaluation Metrics:**

- Primary metric(s) aligned with domain objectives (e.g., F1-Score, RMSE, Accuracy).

Key Items for Mentor Alignment

- Are the proposed evaluation metrics optimal for our problem constraints?
- Is the data split strategy robust against domain shift/bias?

Immediate Roadmap

- Update **Methodology V1** document with mentor modifications.
- Finalize the updated **Experiment Plan**.
- Attach project deliverables to repository/drive:
